

GS1 Malaysia New Services! Barcode Number Generation

Dear Valued GS1 Subscriber,

Difficulties in **generating your barcode numbers?**

Not sure what is the **correct Check Digit & GS1 Company Prefix?**

Don't know if your barcode numbers are **correctly generated?**

GS1 Malaysia can Help!

Having accurate GS1 GTIN barcode numbers for your products is important to ensure they can be uniquely identified in the global marketplace.

What is GTIN?

GTIN stands for **Global Trade Item Number**, and it is GS1's **globally unique product** and **trade item identifier**, also known as a **barcode number**, **SKU**, or **product identifier**.

GS1 GTINs uniquely **identify** different product types & models and are therefore **different** between **products** and **product variants**.

GS1 GTINs come in different lengths, each of which have different uses:

GTIN-13 (GS1 13-digit identifier)	GTIN-14 (GS1 14-digit identifier)
<p>Used to identify product-level items, such as those intended for sale/trade in a retail environment.</p> 	<p>Used to identify carton, tray or pallet level items not intended for sale in a retail environment *.</p> 
<p>Also known as barcode number, Stock Keeping Unit (SKU) Number and product identifier.</p>	<p>Created to facilitate operations of handling, storing, shipping etc. of product units, usually in large quantities or batches.</p>
<p>Usually scanned in a retail environment, through a Point of Sale (POS) System.</p>	<p>Usually scanned in a warehouse or stockroom environment, to record & manage product inventory.</p>
<p>Standard GS1 barcode symbol: EAN-13</p>	<p>Standard GS1 barcode symbol: ITF-14 or GS1-128</p>
<p>* If a carton, tray, or pallet is traded at the retail level (i.e., as a product), you must allocate a GTIN-13 barcode number.</p>	

How to allocate a GS1 barcode number:

The **GS1 Malaysia Barcode Number Generation Service** can help you to generate GTIN-13 and GTIN-14 barcodes for a nominal fee and ensure that:

- i) Your products have an **accurate & unique identifier** that increases their **visibility**.
- ii) Your products can be **easily identified** amongst the myriad of similar products in the global market.
- iii) You can **immediately** allocate GS1-generated barcode numbers to your products.

GTIN-13 Number Generation Service (Product-level/SKU)

RM 100.00 for **10** GS1 barcode numbers (Small Block License only)

RM 250.00 for **250** GS1 barcode numbers

RM 500.00 for **1,000** GS1 barcode numbers

GTIN-14 Number Generation Service (Carton / Non-retail level)

RM 100.00 for **80** GS1 barcode numbers

Notes:

1. Contact GS1 Malaysia at gs1malaysia@gs1my.org if you have any questions about barcode number generation.
2. All generated barcode numbers are from a **member's allocated GS1 licensed prefix(es)**.
3. Generated barcode numbers **ARE NOT** a new separate block i.e., is not a new set of numbers.
4. The barcode number generation service is an **as-needed service**. It is not subscription-based, nor does it renew with the license renewal.

5. All generated barcode numbers start from the **first allocated number**.

- a. If you want to start from a different running number (e.g., your previous PIC had generated the barcode numbers for you, but they are no longer able to), you must provide GS1 with the **last used or last known full barcode number**; GS1 will generate the **barcode number after that number** for you. This is to **prevent duplication of barcode numbers** i.e., 2 or more products carrying the same barcode number.
